# Imprivata Enterprise Access Management (formerly OneSign) Analytics

Analyze and take action on your EAM data

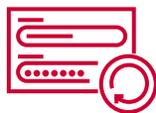

Using single sign-on (SSO) capabilities for IT systems can help healthcare organizations provide their clinicians with fast, secure access to patient information.

But just how much time are clinicians saving? Where could IT operational costs be saved?

Understanding the usage of SSO can help an organization visualize the value of providing clinicians with secure and convenient access to electronic health records (EHRs), while also allowing IT teams to properly allocate operational resources.

Imprivata EAM Analytics allows IT teams to gain actionable insights into their organization's SSO data, highlighting information such as:

### Login location

Insight into where clinicians are logging in - to determine most used methods or potential improvements to make.

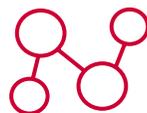

### Time savings

Track time savings and overall usage with login method reporting saving the most keystrokes and most hours.

### Application usage

See most and least used SSO applications to understand usage and potential application license savings.

### Endpoint reporting

Understand which workstations are being logged into and where issues are to resolve potential adoption issues.

### Failed Login

See how often users are experiencing failed logins to resolve user issues and provide training.

With EAM Analytics, IT teams can visualize areas of success for leadership, where savings can be made, or where gaps may exist to provide additional education. Track resolutions to ensure issues are decreasing, money is being saved, and clinicians are fully utilizing EAM in their daily workflows.

Gain valuable information to help drive the adoption of EAM amongst staff and understand where IT operation spend can be saved. Allowing IT to fully understand workstation and application usage across the organization.

Imprivata is the digital identity company for mission- and life-critical industries, redefining how organizations solve complex workflow, security, and compliance challenges with solutions that protect critical data and applications without workflow disruption. Its platform of interoperable identity, authentication, and access management solutions enables organizations in over 45 countries to fully manage and secure all enterprise and third-party digital identities by establishing trust between people, technology, and information.
